### Water and Sanitation Program- East Asia and the Pacific

#### WSP MISSION

To help the poor gain sustained access to improved water and sanitation services

## About the Project

The Philippines Sanitation Sourcebook is a product of the Water Supply and Sanitation Performance Enhancement Project (WPEP), which is unique a partnership project among different government agencies working in the water and sanitation sectors.

WPEP seeks to enhance the access of Filipinos to water and sanitation services by evaluating and innovating on investment projects, disseminating best practices and lessons learned to sector practitioners, facilitating policy reforms and developing institutional capacity for improved service delivery. Among the project's most important clients are national decision-makers, local government units and service providers.

The Department of the Interior and Local Government, through its Water Supply and Sanitation Project Management Office, has been privileged to lead a dynamic group of government cooperators throughout the implementation of WPEP (2000-2006). The agencies involved in WPEP are the Department of Environment and Natural Resources, Department of Finance, Department of Health, Local Water Utilities Administration, Metropolitan Waterworks and Sewerage System, National Anti-Poverty Commission, National Economic and Development Authority (co-chair), and the National Water Resources Board.

Expert advice for the project was provided through the Water and Sanitation Program – East Asia and the Pacific (WSP-EAP) of the World Bank. WPEP is principally financed by the Government of Australia, through its development cooperation agency, the Australian Agency for International Development. Through WSP-EAP program partnership, a number of other donors contribute to specific project outputs. For this Sourcebook, support was provided by the German Technical Cooperation Agency and USA Environment Program.

**Angelo T. Reyes**  
Secretary  
Department of the Interior  
and Local Government
